## Host Information

IP: 192.168.159.136

## Vulnerabilities

### 51988 - Bind Shell Backdoor Detection

## Synopsis

The remote host may have been compromised.

## Description

A shell is listening on the remote port without any authentication being required. An attacker may use it by connecting to the remote port and sending commands directly.

## Solution

Verify if the remote host has been compromised, and reinstall the system if necessary.

## Risk Factor

Critical

## CVSS v3.0 Base Score

9.8 (CVSS:3.0/AV:N/AC:L/PR:N/UI:N/S:U/C:H/I:H/A:H)

---

tcp/1524/wild\_shell

```
Nessus was able to execute the command "id" using the
following request :
```

```
This produced the following truncated output (limited to 10 lines) :
```

```
----- snip -----
```

```
root@metasploitable:/# uid=0(root) gid=0(root) groups=0(root)
root@metasploitable:/#
```

```
----- snip -----
```

## 32314 - Debian OpenSSH/OpenSSL Package Random Number Generator Weakness

### Synopsis

The remote SSH host keys are weak.

### Description

The remote SSH host key has been generated on a Debian or Ubuntu system which contains a bug in the random number generator of its OpenSSL library.

The problem is due to a Debian packager removing nearly all sources of entropy in the remote version of OpenSSL.

An attacker can easily obtain the private part of the remote key and use this to set up decipher the remote session or set up a man in the middle attack.

### See Also

<http://www.nessus.org/u?107f9bdc>

<http://www.nessus.org/u?f14f4224>

### Solution

Consider all cryptographic material generated on the remote host to be guessable. In particular, all SSH, SSL and OpenVPN key material should be re-generated.

## 33447 - Multiple Vendor DNS Query ID Field Prediction Cache Poisoning

### Synopsis

The remote name resolver (or the server it uses upstream) is affected by a DNS cache poisoning vulnerability.

### Description

The remote DNS resolver does not use random ports when making queries to third-party DNS servers. An unauthenticated, remote attacker can exploit this to poison the remote DNS server, allowing the attacker to divert legitimate traffic to arbitrary sites.

### See Also

## 11356 - NFS Exported Share Information Disclosure

### Synopsis

It is possible to access NFS shares on the remote host.

### Description

At least one of the NFS shares exported by the remote server could be mounted by the scanning host. An attacker may be able to leverage this to read (and possibly write) files on remote host.

### Solution

Configure NFS on the remote host so that only authorized hosts can mount its remote shares.

### Risk Factor

Critical

## 46882 - UnrealIRCd Backdoor Detection

### Synopsis

The remote IRC server contains a backdoor.

### Description

The remote IRC server is a version of UnrealIRCd with a backdoor that allows an attacker to execute arbitrary code on the affected host.

### See Also

```

## 61708 - VNC Server 'password' Password

### Synopsis

A VNC server running on the remote host is secured with a weak password.

### Description

The VNC server running on the remote host is secured with a weak password. Nessus was able to login using VNC authentication and a password of 'password'. A remote, unauthenticated attacker could exploit this to take control of the system.

### Solution

Secure the VNC service with a strong password.

### Risk Factor

Critical

### CVSS v2.0 Base Score

tcp/5900/vnc

```
Nessus logged in using a password of "password".
```

## 136769 - ISC BIND Service Downgrade / Reflected DoS

### Synopsis

The remote name server is affected by Service Downgrade / Reflected DoS vulnerabilities.

### Description

According to its self-reported version, the instance of ISC BIND 9 running on the remote name server is affected by performance downgrade and Reflected DoS vulnerabilities. This is due to BIND DNS not sufficiently limiting the number fetches which may be performed while processing a referral response.

An unauthenticated, remote attacker can exploit this to cause degrade the service of the recursive server or to use the affected server as a reflector in a reflection attack.

### See Also

<https://kb.isc.org/docs/cve-2020-8616>

### Solution

Upgrade to the ISC BIND version referenced in the vendor advisory.

### Risk Factor

```

## 90509 - Samba Badlock Vulnerability

### Synopsis

An SMB server running on the remote host is affected by the Badlock vulnerability.

### Description

The version of Samba, a CIFS/SMB server for Linux and Unix, running on the remote host is affected by a flaw, known as Badlock, that exists in the Security Account Manager (SAM) and Local Security Authority (Domain Policy) (LSAD) protocols due to improper authentication level negotiation over Remote Procedure Call (RPC) channels. A man-in-the-middle attacker who is able to intercept the traffic between a client and a server hosting a SAM database can exploit this flaw to force a downgrade of the authentication level, which allows the execution of arbitrary Samba network calls in the context of the intercepted user, such as viewing or modifying sensitive security data in the Active Directory (AD) database or disabling critical services.

### See Also

<http://badlock.org>

<https://www.samba.org/samba/security/CVE-2016-2118.html>

### Solution

Upgrade to Samba version 4.2.11 / 4.3.8 / 4.4.2 or later.

### Risk Factor

Medium

### CVSS v3.0 Base Score

7.5 (CVSS:3.0/AV:N/AC:H/PR:N/UI:R/S:U/C:H/I:H/A:H)

tcp/445/cifs

```
Nessus detected that the Samba Badlock patch has not been applied.
```

## 10245 - rsh Service Detection

### Synopsis

The rsh service is running on the remote host.

### Description

The rsh service is running on the remote host. This service is vulnerable since data is passed between the rsh client and server in cleartext. A man-in-the-middle attacker can exploit this to sniff logins and passwords. Also, it may allow poorly authenticated logins without passwords. If the host is vulnerable to TCP sequence number guessing (from any network) or IP spoofing (including ARP hijacking on a local network) then it may be possible to bypass authentication.

Finally, rsh is an easy way to turn file-write access into full logins through the .rhosts or rhosts.equiv files.

### Solution

Comment out the 'rsh' line in /etc/inetd.conf and restart the inetd process. Alternatively, disable this service and use SSH instead.

### Risk Factor

High

### VPR Score

5.9

### CVSS v2.0 Base Score

### Plugin Output

tcp/514/rsh

## 12085 - Apache Tomcat Default Files

### Synopsis

The remote web server contains default files.

### Description

The default error page, default index page, example JSPs and/or example servlets are installed on the remote Apache Tomcat server. These files should be removed as they may help an attacker uncover information about the remote Tomcat install or host itself.

### See Also

<http://www.nessus.org/u?4cb3b4dd>

[https://www.owasp.org/index.php/Securing\\_tomcat](https://www.owasp.org/index.php/Securing_tomcat)

### Solution

Delete the default index page and remove the example JSP and servlets. Follow the Tomcat or OWASP instructions to replace or modify the default error page.

### Risk Factor

Medium

### CVSS v3.0 Base Score

5.3 (CVSS:3.0/AV:N/AC:L/PR:N/UI:N/S:U/C:L/I:N/A:N)

### CVSS v2.0 Base Score

5.0 (CVSS2#AV:N/AC:L/Au:N/C:P/I:N/A:N)

### Plugin Information

Published: 2004/03/02, Modified: 2019/08/12

### Plugin Output

tcp/8180/www

The following default files were found :

<http://192.168.159.136:8180/tomcat-docs/index.html>

The server is not configured to return a custom page in the event of a client requesting a non-existent resource.

This may result in a potential disclosure of sensitive information about the server to attackers.

## 12217 - DNS Server Cache Snooping Remote Information Disclosure

### Synopsis

The remote DNS server is vulnerable to cache snooping attacks.

### Description

The remote DNS server responds to queries for third-party domains that do not have the recursion bit set.

This may allow a remote attacker to determine which domains have recently been resolved via this name server, and therefore which hosts have been recently visited.

For instance, if an attacker was interested in whether your company utilizes the online services of a particular financial institution, they would be able to use this attack to build a statistical model regarding company usage of that financial institution. Of course, the attack can also be used to find B2B partners, web-surfing patterns, external mail servers, and more.

Note: If this is an internal DNS server not accessible to outside networks, attacks would be limited to the internal network. This may include employees, consultants and potentially users on a guest network or WiFi connection if supported.

### See Also

[http://cs.unc.edu/~fabian/course\\_papers/cache\\_snooping.pdf](http://cs.unc.edu/~fabian/course_papers/cache_snooping.pdf)

### Solution

Contact the vendor of the DNS software for a fix.

### Risk Factor

Medium

### CVSS v3.0 Base Score

5.3 (CVSS:3.0/AV:N/AC:L/PR:N/UI:N/S:U/C:L/I:N/A:N)

### Plugin Output

udp/53/dns

Nessus sent a non-recursive query for example.edu  
and received 1 answer :

93.184.216.34

## 11213 - HTTP TRACE / TRACK Methods Allowed

### Synopsis

Debugging functions are enabled on the remote web server.

### Description

The remote web server supports the TRACE and/or TRACK methods. TRACE and TRACK are HTTP methods that are used to debug web server connections.

### See Also

## Synopsis

The remote name server is affected by a denial of service vulnerability.

## Description

According to its self-reported version number, the installation of ISC BIND running on the remote name server is version 9.x prior to 9.11.22, 9.12.x prior to 9.16.6 or 9.17.x prior to 9.17.4. It is, therefore, affected by a denial of service (DoS) vulnerability due to an assertion failure when attempting to verify a truncated response to a TSIG-signed request. An authenticated, remote attacker can exploit this issue by sending a truncated response to a TSIG-signed request to trigger an assertion failure, causing the server to exit.

Note that Nessus has not tested for this issue but has instead relied only on the application's self-reported version number.

## See Also

<https://kb.isc.org/docs/cve-2020-8622>

## Solution

Upgrade to BIND 9.11.22, 9.16.6, 9.17.4 or later.

## 136808 - ISC BIND Denial of Service

### Synopsis

The remote name server is affected by an assertion failure vulnerability.

### Description

A denial of service (DoS) vulnerability exists in ISC BIND versions 9.11.18 / 9.11.18-S1 / 9.12.4-P2 / 9.13 / 9.14.11 / 9.15 / 9.16.2 / 9.17 / 9.17.1 and earlier. An unauthenticated, remote attacker can exploit this issue, via a specially-crafted message, to cause the service to stop responding.

Note that Nessus has not tested for this issue but has instead relied only on the application's self-reported version number.

### See Also

<https://kb.isc.org/docs/cve-2020-8617>

### Solution

Upgrade to the patched release most closely related to your current version of BIND.

### Risk Factor

Medium

## 57608 - SMB Signing not required

### Synopsis

---

Signing is not required on the remote SMB server.

### Description

---

Signing is not required on the remote SMB server. An unauthenticated, remote attacker can exploit this to conduct man-in-the-middle attacks against the SMB server.

### See Also

---

<http://www.nessus.org/u?df39b8b3>

<http://technet.microsoft.com/en-us/library/cc731957.aspx>

## 90317 - SSH Weak Algorithms Supported

### Synopsis

The remote SSH server is configured to allow weak encryption algorithms or no algorithm at all.

### Description

Nessus has detected that the remote SSH server is configured to use the Arcfour stream cipher or no cipher at all. RFC 4253 advises against using Arcfour due to an issue with weak keys.

### See Also

<https://tools.ietf.org/html/rfc4253#section-6.3>

### Solution

Contact the vendor or consult product documentation to remove the weak ciphers.

### Risk Factor

## 42263 - Unencrypted Telnet Server

## Synopsis

The remote Telnet server transmits traffic in cleartext.

Description	

The remote host is running a Telnet server over an unencrypted channel.

Using Telnet over an unencrypted channel is not recommended as logins, passwords, and commands are transferred in cleartext. This allows a remote, man-in-the-middle attacker to eavesdrop on a Telnet session to obtain credentials or other sensitive information and to modify traffic exchanged between a client and server.

SSH is preferred over Telnet since it protects credentials from eavesdropping and can tunnel additional data streams such as an X11 session.

### Solution

Disable the Telnet service and use SSH instead.

Risk Factor	Impact	Control
1. Lack of industry connections	Reduced visibility and networking opportunities	Attend industry conferences and seminars
2. Limited marketing budget	Reduced reach and brand awareness	Utilize social media and content marketing
3. Niche or experimental sound	Reduced mainstream appeal	Collaborate with established acts
4. Limited live performance opportunities	Reduced fan base growth	Seek out local venues and festivals
5. Inconsistent output	Reduced fan engagement	Establish a regular release schedule
6. Limited live performance opportunities	Reduced fan base growth	Seek out local venues and festivals
7. Limited live performance opportunities	Reduced fan base growth	Seek out local venues and festivals
8. Limited live performance opportunities	Reduced fan base growth	Seek out local venues and festivals

## 85582 - Web Application Potentially Vulnerable to Clickjacking

### Synopsis

The remote web server may fail to mitigate a class of web application vulnerabilities.

### Description

The remote web server does not set an X-Frame-Options response header or a Content-Security-Policy 'frame-ancestors' response header in all content responses. This could potentially expose the site to a clickjacking or UI redress attack, in which an attacker can trick a user into clicking an area of the vulnerable page that is different than what the user perceives the page to be. This can result in a user performing fraudulent or malicious transactions.

X-Frame-Options has been proposed by Microsoft as a way to mitigate clickjacking attacks and is currently supported by all major browser vendors.

Content-Security-Policy (CSP) has been proposed by the W3C Web Application Security Working Group, with increasing support among all major browser vendors, as a way to mitigate clickjacking and other attacks. The 'frame-ancestors' policy directive restricts which sources can embed the protected resource.

Note that while the X-Frame-Options and Content-Security-Policy response headers are not the only mitigations for clickjacking, they are currently the most reliable methods that can be detected through automation. Therefore, this plugin may produce false positives if other mitigation strategies (e.g., frame-busting JavaScript) are deployed or if the page does not perform any security-sensitive transactions.

### See Also

<https://en.wikipedia.org/wiki/Clickjacking>

### Solution

Return the X-Frame-Options or Content-Security-Policy (with the 'frame-ancestors' directive) HTTP header with the page's response.

This prevents the page's content from being rendered by another site when using the frame or iframe HTML tags.

## 70658 - SSH Server CBC Mode Ciphers Enabled

### Synopsis

The SSH server is configured to use Cipher Block Chaining.

### Description

The SSH server is configured to support Cipher Block Chaining (CBC) encryption. This may allow an attacker to recover the plaintext message from the ciphertext.

Note that this plugin only checks for the options of the SSH server and does not check for vulnerable software versions.

### Solution

Contact the vendor or consult product documentation to disable CBC mode cipher encryption, and enable CTR or GCM cipher mode encryption.

### Risk Factor

Low

rijndael-cbc@lysator.liu.se
```

## 153953 - SSH Weak Key Exchange Algorithms Enabled

### Synopsis

The remote SSH server is configured to allow weak key exchange algorithms.

### Description

The remote SSH server is configured to allow key exchange algorithms which are considered weak.

This is based on the IETF draft document Key Exchange (KEX) Method Updates and Recommendations for Secure Shell (SSH) RFC9142. Section 4 lists guidance on key exchange algorithms that SHOULD NOT and MUST NOT be enabled. This includes:

diffie-hellman-group-exchange-sha1

diffie-hellman-group1-sha1

gss-gex-sha1-\*

gss-group1-sha1-\*

gss-group14-sha1-\*

rsa1024-sha1

Note that this plugin only checks for the options of the SSH server, and it does not check for vulnerable software versions.

### See Also

<https://datatracker.ietf.org/doc/html/rfc9142>

### Solution

Contact the vendor or consult product documentation to disable the weak algorithms.

### Risk Factor

  hmac-md5-96
  hmac-sha1-96
```

## 42057 - Web Server Allows Password Auto-Completion

### Synopsis

The 'autocomplete' attribute is not disabled on password fields.

### Description

The remote web server contains at least one HTML form field that has an input of type 'password' where 'autocomplete' is not set to 'off'.

While this does not represent a risk to this web server per se, it does mean that users who use the affected forms may have their credentials saved in their browsers, which could in turn lead to a loss of confidentiality if any of them use a shared host or if their machine is compromised at some point.

### Solution

Add the attribute 'autocomplete=off' to these fields to prevent browsers from caching credentials.

### Risk Factor

Low

### Plugin Information

## 10028 - DNS Server BIND version Directive Remote Version Detection

### Synopsis

It is possible to obtain the version number of the remote DNS server.

### Description

The remote host is running BIND or another DNS server that reports its version number when it receives a special request for the text 'version.bind' in the domain 'chaos'.

This version is not necessarily accurate and could even be forged, as some DNS servers send the information based on a configuration file.

### Solution

It is possible to hide the version number of BIND by using the 'version' directive in the 'options' section in named.conf.

### Risk Factor

None

### References

## 43111 - HTTP Methods Allowed (per directory)

### Synopsis

This plugin determines which HTTP methods are allowed on various CGI directories.

### Description

By calling the OPTIONS method, it is possible to determine which HTTP methods are allowed on each directory.

The following HTTP methods are considered insecure:

PUT, DELETE, CONNECT, TRACE, HEAD

Many frameworks and languages treat 'HEAD' as a 'GET' request, albeit one without any body in the response. If a security constraint was set on 'GET' requests such that only 'authenticatedUsers' could access GET requests for a particular servlet or resource, it would be bypassed for the 'HEAD' version. This allowed unauthorized blind submission of any privileged GET request.

As this list may be incomplete, the plugin also tests - if 'Thorough tests' are enabled or 'Enable web applications tests' is set to 'yes'

in the scan policy - various known HTTP methods on each directory and considers them as unsupported if it receives a response code of 400, 403, 405, or 501.

Note that the plugin output is only informational and does not necessarily indicate the presence of any security vulnerabilities.

```
The remote web server type is :  
Apache-Coyote/1.1
```

## 10114 - ICMP Timestamp Request Remote Date Disclosure

### Synopsis

It is possible to determine the exact time set on the remote host.

### Description

The remote host answers to an ICMP timestamp request. This allows an attacker to know the date that is set on the targeted machine, which may assist an unauthenticated, remote attacker in defeating time-based authentication protocols.

Timestamps returned from machines running Windows Vista / 7 / 2008 / 2008 R2 are deliberately incorrect, but usually within 1000 seconds of the actual system time.

### Solution

Filter out the ICMP timestamp requests (13), and the outgoing ICMP timestamp replies (14).

### Risk Factor

None

### CVSS v3.0 Base Score

0.0 (CVSS:3.0/AV:L/AC:L/PR:N/UI:N/S:U/C:N/I:N/A:N)

### CVSS v2.0 Base Score

0.0 (CVSS2#AV:L/AC:L/Au:N/C:N/I:N/A:N)

### References

CVE CVE-1999-0524

XREF CWE:200

### Plugin Information

Published: 1999/08/01, Modified: 2023/04/27

### Plugin Output

icmp/0

```
The difference between the local and remote clocks is 2822 seconds.
```

## 14788 - IP Protocols Scan

### Synopsis

This plugin detects the protocols understood by the remote IP stack.

### Description

This plugin detects the protocols understood by the remote IP stack.

The remote host supports the following versions of SMB :  
SMBv1
```

## 50344 - Missing or Permissive Content-Security-Policy frame-ancestors HTTP Response Header

### Synopsis

The remote web server does not take steps to mitigate a class of web application vulnerabilities.

### Description

The remote web server in some responses sets a permissive Content-Security-Policy (CSP) frame-ancestors response header or does not set one at all.

The CSP frame-ancestors header has been proposed by the W3C Web Application Security Working Group as a way to mitigate cross-site scripting and clickjacking attacks.

## 50345 - Missing or Permissive X-Frame-Options HTTP Response Header

### Synopsis

The remote web server does not take steps to mitigate a class of web application vulnerabilities.

### Description

The remote web server in some responses sets a permissive X-Frame-Options response header or does not set one at all.

The X-Frame-Options header has been proposed by Microsoft as a way to mitigate clickjacking attacks and is currently supported by all major browser vendors

### See Also

<https://en.wikipedia.org/wiki/Clickjacking>

<http://www.nessus.org/u?399b1f56>

### Solution

Set a properly configured X-Frame-Options header for all requested resources.

### Risk Factor

None

### Plugin Information

Published: 2010/10/26, Modified: 2021/01/19

### Plugin Output

tcp/8180/www

The following pages do not set a X-Frame-Options response header or set a permissive policy:

## 10437 - NFS Share Export List

### Synopsis

The remote NFS server exports a list of shares.

### Description

This plugin retrieves the list of NFS exported shares.

### See Also

<http://www.tldp.org/HOWTO/NFS-HOWTO/security.html>

### Solution

Ensure each share is intended to be exported.

### Risk Factor

None

### Plugin Information

Published: 2000/06/07, Modified: 2019/10/04

### Plugin Output

tcp/2049/rpc-nfs

```
Here is the export list of 192.168.159.136 :
```

```
/ *
```

### Synopsis

It is possible to determine which TCP ports are open.

### Description

This plugin is a SYN 'half-open' port scanner. It shall be reasonably quick even against a firewalled target.

Note that SYN scans are less intrusive than TCP (full connect) scans against broken services, but they might cause problems for less robust firewalls and also leave unclosed connections on the remote target, if the network is loaded.

### Solution

Protect your target with an IP filter.

### Risk Factor

None

### Plugin Information

Published: 2009/02/04, Modified: 2024/03/19

### Plugin Output

tcp/21/ftp

```
Port 21/tcp was found to be open
```

### Synopsis

---

It is possible to determine which TCP ports are open.

### Description

---

This plugin is a SYN 'half-open' port scanner. It shall be reasonably quick even against a firewalled target.

Note that SYN scans are less intrusive than TCP (full connect) scans against broken services, but they might cause problems for less robust firewalls and also leave unclosed connections on the remote target, if the network is loaded.

### Solution

---

Protect your target with an IP filter.

### Risk Factor

---

None

### Plugin Information

### Plugin Output

---

tcp/34198/rpc-mountd

```
Port 34198/tcp was found to be open
```

### Synopsis

---

It is possible to determine which TCP ports are open.

### Description

---

This plugin is a SYN 'half-open' port scanner. It shall be reasonably quick even against a firewalled target.

Note that SYN scans are less intrusive than TCP (full connect) scans against broken services, but they might cause problems for less robust firewalls and also leave unclosed connections on the remote target, if the network is loaded.

### Solution

---

Protect your target with an IP filter.

### Risk Factor

---

None

### Plugin Information

---

Published: 2009/02/04, Modified: 2024/03/19

### Plugin Output

---

tcp/42314

```
Port 42314/tcp was found to be open
```

### Synopsis

## 26024 - PostgreSQL Server Detection

### Synopsis

A database service is listening on the remote host.

### Description

The remote service is a PostgreSQL database server, or a derivative such as EnterpriseDB.

### See Also

<https://www.postgresql.org/>

### Solution

Limit incoming traffic to this port if desired.

### Risk Factor

None

### Plugin Information

Published: 2007/09/14, Modified: 2023/05/24

### Plugin Output

tcp/5432/postgresql

## 40665 - Protected Web Page Detection

### Synopsis

Some web pages require authentication.

### Description

The remote web server requires HTTP authentication for the following pages. Several authentication schemes are available :

- Basic is the simplest, but the credentials are sent in cleartext.
- NTLM provides an SSO in a Microsoft environment, but it cannot be used on both the proxy and the web server. It is also weaker than Digest.
- Digest is a cryptographically strong scheme. Credentials are never sent in cleartext, although they may still be cracked by a dictionary attack.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2009/08/21, Modified: 2016/10/04

### Plugin Output

tcp/8180/www

The following pages are protected by the Basic authentication scheme :

```
/host-manager/html  
/manager/html  
/manager/status
```

## 11111 - RPC Services Enumeration

### Synopsis

An ONC RPC service is running on the remote host.

### Description

By sending a DUMP request to the portmapper, it was possible to enumerate the ONC RPC services running on the remote port. Using this information, it is possible to connect and bind to each service by sending an RPC request to the remote port.

### Solution

## 10263 - SMTP Server Detection

### Synopsis

An SMTP server is listening on the remote port.

### Description

The remote host is running a mail (SMTP) server on this port.

Since SMTP servers are the targets of spammers, it is recommended you disable it if you do not use it.

### Solution

Disable this service if you do not use it, or filter incoming traffic to this port.

### Risk Factor

None

### References

## 10881 - SSH Protocol Versions Supported

### Synopsis

A SSH server is running on the remote host.

### Description

This plugin determines the versions of the SSH protocol supported by the remote SSH daemon.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2002/03/06, Modified: 2021/01/19

### Plugin Output

tcp/22/ssh

```
The remote SSH daemon supports the following versions of the  
SSH protocol :
```

- 1.99
- 2.0

## 153588 - SSH SHA-1 HMAC Algorithms Enabled

### Synopsis

The remote SSH server is configured to enable SHA-1 HMAC algorithms.

### Description

The remote SSH server is configured to enable SHA-1 HMAC algorithms.

Although NIST has formally deprecated use of SHA-1 for digital signatures, SHA-1 is still considered secure for HMAC as the security of HMAC does not rely on the underlying hash function being resistant to collisions.

Note that this plugin only checks for the options of the remote SSH server.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2021/09/23, Modified: 2022/04/05

### Plugin Output

tcp/22/ssh

```
The following client-to-server SHA-1 Hash-based Message Authentication Code (HMAC) algorithms are supported :
```

```
hmac-sha1
hmac-sha1-96
```

```
The following server-to-client SHA-1 Hash-based Message Authentication Code (HMAC) algorithms are supported :
```

```
hmac-sha1
hmac-sha1-96
```

## 10267 - SSH Server Type and Version Information

### Synopsis

An SSH server is listening on this port.

### Description

It is possible to obtain information about the remote SSH server by sending an empty authentication request.

### Solution

n/a

### Risk Factor

None

### References

XREF IAVT:0001-T-0933

### Plugin Information

Published: 1999/10/12, Modified: 2020/09/22

### Plugin Output

tcp/22/ssh

```
SSH version : SSH-2.0-OpenSSH_4.7p1 Debian-8ubuntu1
SSH supported authentication : publickey,password
```

## 25240 - Samba Server Detection

### Synopsis

An SMB server is running on the remote host.

### Description

The remote host is running Samba, a CIFS/SMB server for Linux and Unix.

### See Also

<https://www.samba.org/>

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2007/05/16, Modified: 2022/10/12

### Plugin Output

tcp/445/cifs

## 104887 - Samba Version

### Synopsis

It was possible to obtain the samba version from the remote operating system.

### Description

Nessus was able to obtain the samba version from the remote operating by sending an authentication request to port 139 or 445. Note that this plugin requires SMB1 to be enabled on the host.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2017/11/30, Modified: 2019/11/22

### Plugin Output

tcp/445/cifs

```
The remote Samba Version is : Samba 3.0.20-Debian
```

## 96982 - Server Message Block (SMB) Protocol Version 1 Enabled (uncredentialed check)

### Synopsis

The remote Windows host supports the SMBv1 protocol.

### Description

The remote Windows host supports Server Message Block Protocol version 1 (SMBv1). Microsoft recommends that users discontinue the use of SMBv1 due to the lack of security features that were included in later SMB versions. Additionally, the Shadow Brokers group reportedly has an exploit that affects SMB; however, it is unknown if the exploit affects SMBv1 or another version. In response to this, US-CERT recommends that users disable SMBv1 per SMB best practices to mitigate these potential issues.

### See Also

<https://blogs.technet.microsoft.com/filecab/2016/09/16/stop-using-smb1/>

<https://support.microsoft.com/en-us/help/2696547/how-to-detect-enable-and-disable-smbv1-smbv2-and-smbv3-in-windows-and>

<http://www.nessus.org/u?8dcab5e4>

<http://www.nessus.org/u?234f8ef8>

<http://www.nessus.org/u?4c7e0cf3>

### Solution

Disable SMBv1 according to the vendor instructions in Microsoft KB2696547. Additionally, block SMB directly by blocking TCP port 445 on all network boundary devices. For SMB over the NetBIOS API, block TCP ports 137 / 139 and UDP ports 137 / 138 on all network boundary devices.

### Risk Factor

None

### References

XREF IAVT:0001-T-0710

### Plugin Information

Published: 2017/02/03, Modified: 2020/09/22

### Plugin Output

tcp/445/cifs

```
The remote host supports SMBv1.
```

## 22964 - Service Detection

### Synopsis

The remote service could be identified.

### Description

Nessus was able to identify the remote service by its banner or by looking at the error message it sends when it receives an HTTP request.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2007/08/19, Modified: 2024/03/26

### Plugin Output

tcp/21/ftp

```
An FTP server is running on this port.
```

## 22964 - Service Detection

### Synopsis

The remote service could be identified.

### Description

Nessus was able to identify the remote service by its banner or by looking at the error message it sends when it receives an HTTP request.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2007/08/19, Modified: 2024/03/26

### Plugin Output

### Plugin Output

tcp/3306/mysql

```
A MySQL server is running on this port.
```

## 11819 - TFTP Daemon Detection

### Synopsis

A TFTP server is listening on the remote port.

### Description

The remote host is running a TFTP (Trivial File Transfer Protocol) daemon. TFTP is often used by routers and diskless hosts to retrieve their configuration. It can also be used by worms to propagate.

### Solution

Disable this service if you do not use it.

### Risk Factor

None

### Plugin Information

Published: 2003/08/13, Modified: 2022/12/28

### Plugin Output

udp/69/tftp

## 19941 - TWiki Detection

### Synopsis

The remote web server hosts a Wiki system written in Perl.

### Description

The remote host is running TWiki, an open source wiki system written in Perl.

### See Also

<http://twiki.org>

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2005/10/06, Modified: 2023/05/24

### Plugin Output

tcp/80/www

```
URL      : http://192.168.159.136/twiki/bin/view
Version  : 01 Feb 2003
```

## 19288 - VNC Server Security Type Detection

### Synopsis

A VNC server is running on the remote host.

### Description

This script checks the remote VNC server protocol version and the available 'security types'.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2005/07/22, Modified: 2021/07/13

### Plugin Output

tcp/5900/vnc

```
\n\nThe remote VNC server chose security type #2 (VNC authentication)
```

## 65792 - VNC Server Unencrypted Communication Detection

### Synopsis

A VNC server with one or more unencrypted 'security-types' is running on the remote host.

### Description

This script checks the remote VNC server protocol version and the available 'security types' to determine if any unencrypted 'security-types' are in use or available.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2013/04/03, Modified: 2014/03/12

### Plugin Output

tcp/5900/vnc

```
The remote VNC server supports the following security type  
which does not perform full data communication encryption :
```

```
  2 (VNC authentication)
```

## 10342 - VNC Software Detection

### Synopsis

The remote host is running a remote display software (VNC).

### Description

The remote host is running VNC (Virtual Network Computing), which uses the RFB (Remote Framebuffer) protocol to provide remote access to graphical user interfaces and thus permits a console on the remote host to be displayed on another.

### See Also

<https://en.wikipedia.org/wiki/Vnc>

### Solution

Make sure use of this software is done in accordance with your organization's security policy and filter incoming traffic to this port.

### Risk Factor

None

### Plugin Information

Published: 2000/03/07, Modified: 2017/06/12

### Plugin Output

tcp/5900/vnc

```
The highest RFB protocol version supported by the server is :
```

```
3.3
```

## 135860 - WMI Not Available

### Synopsis

WMI queries could not be made against the remote host.

### Description

WMI (Windows Management Instrumentation) is not available on the remote host over DCOM. WMI queries are used to gather information about the remote host, such as its current state, network interface configuration, etc.

Without this information Nessus may not be able to identify installed software or security vulnerabilities that exist on the remote host.

### See Also

<https://docs.microsoft.com/en-us/windows/win32/wmisdk/wmi-start-page>

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2020/04/21, Modified: 2024/03/26

### Plugin Output

tcp/445/cifs

```
Can't connect to the 'root\CIMV2' WMI namespace.
```

## 72771 - Web Accessible Backups

### Synopsis

The remote web server hosts web-accessible backups or archives.

### Description

The remote web server is hosting web-accessible archive files that may contain backups or sensitive data.

### Solution

Review each of the files and ensure they are in compliance with your security policy.

### Risk Factor

None

### Plugin Information

Published: 2014/03/03, Modified: 2022/04/11

### Plugin Output

tcp/8180/www

```
Nessus was able to identify the following archive file on the  
remote web server :
```

```
ZIP Archive :  
  http://192.168.159.136:8180/tomcat-docs/appdev/sample/sample.war
```

## 100669 - Web Application Cookies Are Expired

### Synopsis

HTTP cookies have an 'Expires' attribute that is set with a past date or time.

### Description

The remote web application sets various cookies throughout a user's unauthenticated and authenticated session. However, Nessus has detected that one or more of the cookies have an 'Expires' attribute that is set with a past date or time, meaning that these cookies will be removed by the browser.

### See Also

<https://tools.ietf.org/html/rfc6265>

### Solution

Each cookie should be carefully reviewed to determine if it contains sensitive data or is relied upon for a security decision.

If needed, set an expiration date in the future so the cookie will persist or remove the Expires cookie attribute altogether to convert the cookie to a session cookie.

### Risk Factor

None

### Plugin Information

Published: 2017/06/07, Modified: 2021/12/20

### Plugin Output

tcp/80/www

## 85601 - Web Application Cookies Not Marked HttpOnly

### Synopsis

---

HTTP session cookies might be vulnerable to cross-site scripting attacks.

### Description

---

The remote web application sets various cookies throughout a user's unauthenticated and authenticated session. However, one or more of those cookies are not marked 'HttpOnly', meaning that a malicious client-side script, such as JavaScript, could read them. The HttpOnly flag is a security mechanism to protect against cross-site scripting attacks, which was proposed by Microsoft and initially implemented in Internet Explorer. All modern browsers now support it.

Note that this plugin detects all general cookies missing the HttpOnly cookie flag, whereas plugin 48432 (Web Application Session Cookies Not Marked HttpOnly) will only detect session cookies from an authenticated session missing the HttpOnly cookie flag.

### See Also

---

<https://www.owasp.org/index.php/HttpOnly>

### Solution

---

Each cookie should be carefully reviewed to determine if it contains sensitive data or is relied upon for a security decision.

If possible, add the 'HttpOnly' attribute to all session cookies and any cookies containing sensitive data.

### Risk Factor

---

None

## 85602 - Web Application Cookies Not Marked Secure

### Synopsis

HTTP session cookies might be transmitted in cleartext.

### Description

The remote web application sets various cookies throughout a user's unauthenticated and authenticated session. However, there are instances where the application is running over unencrypted HTTP or the cookies are not marked 'secure', meaning the browser could send them back over an unencrypted link under certain circumstances. As a result, it may be possible for a remote attacker to intercept these cookies.

Note that this plugin detects all general cookies missing the 'secure'

cookie flag, whereas plugin 49218 (Web Application Session Cookies Not Marked Secure) will only detect session cookies from an authenticated session missing the secure cookie flag.

### See Also

<https://www.owasp.org/index.php/SecureFlag>

### Solution

Each cookie should be carefully reviewed to determine if it contains sensitive data or is relied upon for a security decision.

If possible, ensure all communication occurs over an encrypted channel and add the 'secure' attribute to all session cookies or any cookies containing sensitive data.

### Risk Factor

None

## 85602 - Web Application Cookies Not Marked Secure

### Synopsis

HTTP session cookies might be transmitted in cleartext.

### Description

The remote web application sets various cookies throughout a user's unauthenticated and authenticated session. However, there are instances where the application is running over unencrypted HTTP or the cookies are not marked 'secure', meaning the browser could send them back over an unencrypted link under certain circumstances. As a result, it may be possible for a remote attacker to intercept these cookies.

Note that this plugin detects all general cookies missing the 'secure'

cookie flag, whereas plugin 49218 (Web Application Session Cookies Not Marked Secure) will only detect session cookies from an authenticated session missing the secure cookie flag.

### See Also

<https://www.owasp.org/index.php/SecureFlag>

### Solution

Each cookie should be carefully reviewed to determine if it contains sensitive data or is relied upon for a security decision.

If possible, ensure all communication occurs over an encrypted channel and add the 'secure' attribute to all session cookies or any cookies containing sensitive data.

### Risk Factor

None

### References

## 40773 - Web Application Potentially Sensitive CGI Parameter Detection

### Synopsis

---

An application was found that may use CGI parameters to control sensitive information.

### Description

---

According to their names, some CGI parameters may control sensitive data (e.g., ID, privileges, commands, prices, credit card data, etc.). In the course of using an application, these variables may disclose sensitive data or be prone to tampering that could result in privilege escalation. These parameters should be examined to determine what type of data is controlled and if it poses a security risk.

\*\* This plugin only reports information that may be useful for auditors

\*\* or pen-testers, not a real flaw.

### Solution

---

Ensure sensitive data is not disclosed by CGI parameters. In addition, do not use CGI parameters to control access to resources or privileges.

### Risk Factor

---

None

### Plugin Information

---

Published: 2009/08/25, Modified: 2021/01/19

### Plugin Output

---

tcp/80/www

```
Potentially sensitive parameters for CGI /dvwa/login.php :  
password : Possibly a clear or hashed password, vulnerable to sniffing or dictionary attack
```

## 91815 - Web Application Sitemap

### Synopsis

The remote web server hosts linkable content that can be crawled by Nessus.

### Description

The remote web server contains linkable content that can be used to gather information about a target.

Web server      : Apache Tomcat or Alfresco Community
```

## 11032 - Web Server Directory Enumeration

### Synopsis

It is possible to enumerate directories on the web server.

### Description

This plugin attempts to determine the presence of various common directories on the remote web server. By sending a request for a directory, the web server response code indicates if it is a valid directory or not.

### See Also

<http://projects.webappsec.org/w/page/13246953/Predictable%20Resource%20Location>

### Solution

n/a

### Risk Factor

None

### References

XREF           OWASP:OWASP-CM-006

### Plugin Information

Published: 2002/06/26, Modified: 2021/08/17

### Plugin Output

tcp/80/www

```
The following directories were discovered:  
/cgi-bin, /doc, /test, /icons, /phpMyAdmin, /twiki/bin
```

```
While this is not, in and of itself, a bug, you should manually inspect  
these directories to ensure that they are in compliance with company  
security standards
```

## 11422 - Web Server Unconfigured - Default Install Page Present

### Synopsis

The remote web server is not configured or is improperly configured.

### Description

The remote web server uses its default welcome page. Therefore, it's probable that this server is not used at all or is serving content that is meant to be hidden.

### Solution

Disable this service if you do not use it.

### Risk Factor

None

### Plugin Information

## 11424 - WebDAV Detection

### Synopsis

---

The remote server is running with WebDAV enabled.

### Description

---

WebDAV is an industry standard extension to the HTTP specification.

It adds a capability for authorized users to remotely add and manage the content of a web server.

If you do not use this extension, you should disable it.

### Solution

---

<http://support.microsoft.com/default.aspx?kbid=241520>

### Risk Factor

---

None

### Plugin Information

---

Published: 2003/03/20, Modified: 2011/03/14

### Plugin Output

---

tcp/80/www

## 24004 - WebDAV Directory Enumeration

### Synopsis

Several directories on the remote host are DAV-enabled.

### Description

WebDAV is an industry standard extension to the HTTP specification.

It adds a capability for authorized users to remotely add and manage the content of a web server.

If you do not use this extension, you should disable it.

### Solution

Disable DAV support if you do not use it.

### Risk Factor

None

### Plugin Information

Published: 2007/01/11, Modified: 2011/03/14

### Plugin Output

tcp/80/www

```
The following directories are DAV enabled :  
- /dav/
```

### Synopsis

It was possible to obtain the network name of the remote host.

### Description

The remote host is listening on UDP port 137 or TCP port 445, and replies to NetBIOS nbtscan or SMB requests.

Note that this plugin gathers information to be used in other plugins, but does not itself generate a report.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 1999/10/12, Modified: 2021/02/10

### Plugin Output

udp/137/netbios-ns

```
The following 7 NetBIOS names have been gathered :
```

```
METASPLOITABLE = Computer name
METASPLOITABLE = Messenger Service
METASPLOITABLE = File Server Service
__MSBROWSE__    = Master Browser
WORKGROUP       = Workgroup / Domain name
WORKGROUP       = Master Browser
WORKGROUP       = Browser Service Elections
```

```
This SMB server seems to be a Samba server - its MAC address is NULL.
```
